

Art.No 32-70-00

### New ergonomic solution for transporting patient down in stairs.

Do not carry, just help the stretcher down with patient.

- Reliable, design protected cylinder that is removable and easy to attach when needed with snap-on fastening. It does not require lot of space in vehicle. The weight is 3 kg.
- The cylinder senses the weight of patient. Now it is easy to bring even the heaviest patients down in stair. It can be done easy and steady.
- Coming down in stairs requires only a little power. The cylinder is designed to save user's back and is suitable for all users.
- The cylinder can be used in stairs of different profiles.
- Stretchers can be turned easily in chair position because of small front wheels (extra wheels as standard with stair cylinder).
